

COLIN RICHMAN

DMD., BDS., LDS., RCS., H.D.D.
PERIODONTICS · ORAL MEDICINE · DENTAL IMPLANTS · SFOT

Diplomate, American Board of Periodontology

Programming for all members of the
interdisciplinary dental team
aimed at achieving
comprehensive care
consistently.

Revenues generated from these programs are
contributed to the Richman Family research fund,
administered by the AAP Foundation.

The Diseases, Periodontitis + Peri-implantitis. Diagnostic, Therapeutic and Preventable Considerations.

Clinical Perspectives for the Dental Team for Long-Term Predictability.

This clinical presentation defines the “State of the Art” relative to definitive contemporary periodontitis and peri-implantitis management.

Learning objectives include:

- Periodontal/Peri-implant infection, inflammation, pathology, and systemic implications, from the clinical perspective.
- Impact of periodontal and peri-implant disease on multi-rooted teeth.
- Effective diagnostic records to achieve definitive therapy.
- Achieving long-term treatment success through definitive pocket elimination therapy, either respective or regenerative.
- Plaque control and professional maintenance care, as critical factors for long-term success.
- The relationship between periodontitis/peri-implantitis (chronic inflammation) and a myriad of systemic diseases.

Target audience: clinical members of the dental team: Dentist, Dental Specialist, Hygienist

Achieving Comprehensive Dental Care Consistency

This fun-filled interactive program, will help dentists plus their team members (including specialists) elevate their practices towards more “Big Case Dentistry” and comprehensive care:

Learning objectives include:

- Instilling a philosophy and culture in your team for achieving comprehensive care.
- Avoiding missing opportunities for achieving comprehensive dental care.
- Clinical data gathering – records, analyses, diagnosis, treatment planning, effective case presentation, team responsibilities, treatment delivery, and ‘making it happen.’
- The above data will then be analyzed relative to etiology, diagnosis, and treatment planning in the four categories of Periodontal, structural (teeth), myo-functional, and esthetics (as per Kois, Spear, Roger Levine)

Target audience: clinical members of the dental team: Dentist, Dental Specialist, Hygienist

Testimonials.

The program was beyond expectations. My guest ortho. was impressed and appreciative. Vim Perio.

Love it. RK. Ortho.

No suggestions to improve the course. It was great. CF Ortho.

Excellent Seminar. Can't wait for part 3

I thought your lecture material was spot on. I do hope the residents realize that the complexion of orthodontic practice is changing and that there will be more adults with complex problems to resolve who will end up in their practices. RH Ortho (GSO)

Maybe you can invite him to your program as well. DK Perio. Harvard)

There is such a huge unmet need for combined ortho-perio therapy right now. Dr. Richman does a great job of explaining the etiology of dental-skeletal disharmony and its consequences as well as treatment options. As a practicing periodontist, this knowledge is vital and will be a large part of my practice in the future. NP Perio.

Thank you for a most edifying, practical, and enjoyable lecture on. (SFOT). While many elements of the orthodontic profession call for diverging into commercial exploitation, your lecture is the voice of traditional scientific enlightenment and scholastic integrity. Yet, your protocol has many practical applications which you clearly demonstrate. You have demonstrated how SFOT can accelerate treatment and meet the challenge of corporate usurpation. But you also profer a compelling anthropological rationale for alveolus bone augmentation and its role in daily practice. While your academic standards are inviolable, you still make room for the legitimate perspectives of other colleagues. In a cacophony of health-industrial noise your intrepid call for clinical progress on behalf of innocent patients rings true indeed. NM Ortho/Perio

Your presentation today was the most enlightening and impressive. By way of information, I am an orthodontist and teach with ... I started doing PAOO about 10 years ago. Hopefully your presentation will remove some of the resistance I have incurred. RB OrthoRSBI looks great for us to use. I do not think most orthodontists use or look for this. GC. Ortho

I have not heard of SFOT on a 12-year-old. Amazing! GC OrthoGreat meeting. Very exciting. Looking forward to seeing you in person. RB Otho

Good evidence-based literature foundation. Heavy clinical is nice. Colin's experience is impressive. LS Ortho

Thank you for a wonderful course. Very informative. Such an important topic regarding altering the phenotype to prevent post-orthodontic issues and the major impact on improving tongue volume and airway management. KC Perio

Colin, I enjoyed the presentation which well organized. The technique was detailed both surgical and orthodontic aspects. MG Perio

Thanks for the very informative SFOT lecture. It answered many questions. I do believe there is a future for this procedure in mainstream orthodontics. Thanks. MC Ortho (UI)

Thank you for the informative lecture! SV Perio.

I have reviewed the surveys, and all had excellent reviews. Everyone commented on how they liked the hands-on part. The presentation you provided was certainly hands down the best I have seen in at least the last 10 years. It was perfect for that group and was informative to everyone from the front desk folks, hygienists, general dentists, orthodontist, and periodontists. You spoke to all of us. FB-educator,

The SFOT program presented by Dr. Richman was a great opportunity to reconnect two disciplines that often forget each other. Dr. Richman highlighted the importance of an interdisciplinary team approach to achieve the best outcomes for our patients. Many of the residents in the audience were unfamiliar with what SFOT can bring to our patients, and everyone agreed it was a great learning experience. Combining a didactic portion with a hands-on part allowed the residents to be engaged and involved in the whole 4h session. It is a program I would recommend not only to periodontists or orthodontists but also to other dental disciplines. Looking forward to hearing and learning even more about SFOT. CP Program director

For anyone looking to incorporate surgically facilitated orthodontic therapy, Dr. Richman's class is a must. He has decades worth of experience and follow-up from his numerous cases. He is a leading practitioner in this growing therapy. JW Program director

Testimonials. (educators and program directors)

I have reviewed the surveys, and all had excellent reviews. Everyone commented on how they liked the hands-on part. (IP, Admin.)
